

Full-Stack Web Developer

Hey! 🙋 I'm Yana – a Junior Full-Stack Developer with real freelance and part-time experience. I've been building web apps for 4 years with React, TypeScript and Node.js, and I'm now looking for an entry-level role where I can keep growing and ship things that matter.

Tools:

Experiences

- **2022-2024:** Web development course within Creator IT Academy
- **2024-2025:** Freelancing web applications
- **2025-present:** Part-time cooperation with <https://koloda.shop/>, including webpage refining, product catalog design and overall technical support

Most Recent Projects

STASHIFY

Ever needed to save a code snippet for later, only to spend ages rummaging through notes and comments trying to find it? Stashify solves that – a tool for developers to save, group, and label reusable code snippets. It's **powered by AI** that automatically detects the language and generates a name, description, and tags for each snippet. Built with a **SQL database** and an AI API integration for a clean, fast experience.

KOLODA

Koloda is a Ukrainian handcraft furniture company I've been working with long-term. I completely **redesigned** their Shopify storefront, built custom components, and integrated reviews from multiple platforms – after which the site started receiving its **first orders**. Beyond the webpage, I've also designed product catalogs and infographics tailored to the company's needs.

EDITING FACTORY

Editing Factory is a landing page for a video editing studio, built in **collaboration** with another developer. I handled the design and a significant part of the frontend, while staying in direct **contact** with the client – gathering feedback and iterating throughout the process. One of my first real experiences working in a dev team. Built with React and Tailwind.
